Panel Cleaning and Disinfectant Instructions

The SwiftWall® panel consists of either a semi-hard ABS Hair Cell Surface or a highly durable powder coat painted aluminum surface that makes SwiftWall® Panels perfect for use in a wide range of applications and environments including healthcare, cleanrooms, museums, and construction. All our materials are non-hygroscopic making water-based cleaning products acceptable for panel cleaning and disinfecting. Both ABS and painted aluminum surfaces are resistant to many chemicals used in care and cleaning, however some cleaners are preferred due to their low probability of affecting the surface appearance. A list of commonly available materials for use are listed below along with a partial list of materials that should be avoided due to the potential of damaging the panel surface. Please note that this list is not exhaustive as there are many cleaners that can be used and harsher chemicals that should be avoided.

Please note the following:

Cleaning pads, cloth, sponges, and available items like Swiffer® are preferred in cleaning and dusting the surface. Do not over scrub the panel when using stronger solvents as this may mar the surface.

Bristle brushes or abrasive scouring pads when used with solvents may alter the appearance of the surface. Strong abrasives have the potential to severely scratch the surface especially if used aggressively and will likely be visible after the cleaning.

Tough stains, dirt and grime may require multiple cleaning applications or trying different acceptable cleaners. Scuff marks are readily removed with products such as Magic Eraser.

If you have concerns over a specific cleaner or disinfectant that you would like to use, please try it in an inconspicuous small area first to make sure it doesn't harm the surface in any way prior to a complete cleaning / disinfecting.

Recommended Commonly used cleaning and disinfectant agents:

- Magic Eraser for scuffs
- Swiffer® for dust and lose contaminants
- Warm water
- All-purpose cleaners such as Fantastik® and 409®
- Bleach diluted with warm water to 10%
- Sodium Hydroxide
- Hydrogen Peroxide

- Most Bathroom and kitchen cleaners
- Glass cleaners
- Commercial and household soaps or detergents with warm water
- Ammonia Solutions diluted with warm water to 10%
- Sodium Chloride based aqueous solution diluted to10%
- Citric Acid based aqueous solution diluted to 10%
- Hydrogen Peroxide based aqueous solution diluted to 30%
- Alcohols

Avoid using strong solvents:

- Petroleum based products
- Acetone
- Benzene
- Butyl Acetate
- Abrasive kitchen cleaners
- Gasoline
- Xylene

If you have specific cleaning or disinfectant materials that you commonly use and are unsure as to potential harm to your panel system, please call us at 989-279-0232 and we will assist in determining if the product is acceptable to be used.
